ExxonMobil

Delivering energy when it matters most

No company better understands how important gasoline and diesel are to American consumers and businesses. That's why ExxonMobil, more than any other of the world's oil majors, has **done more to increase supply when it's needed the most**.

BETWEEN APRIL AND JUNE 2026

ExxonMobil produced **more oil and gas** than at any time in the last 20 years (excluding the Middle East)

ExxonMobil produced more U.S. oil and gas out of the Permian Basin than at any time in history, **exceeding all our competitors** by a wide margin

In terms of the products that go into the cars, trucks, and planes that move Americans and power our economy, there is **no company in the world doing more than ExxonMobil**.

ExxonMobil is the world's largest refiner, second only to Sinopec (China).

During the last quarter, our U.S. Gulf Coast refineries ran at the highest production levels than at any time in history.

ExxonMobil was able to produce more diesel (heavy-duty trucking) and jet fuel in the U.S. Gulf Coast in this period than at any time in history.

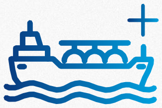
All of this Upstream and Downstream production is only possible because of the **record levels of investment** the company has made since 2017.

$100B
INVESTED

In the United States, ExxonMobil has invested more than $100 billion to grow our ability to produce oil, natural gas, LNG, diesel, gasoline and other essential products; including more than $11 billion in refinery-related investments.

250kbd

In 2023, we started up the **largest refinery expansion** in the U.S since 2012 with the addition of 250kbd, the equivalent of adding a medium-sized refinery.



+15%
INCREASE

The first of three trains came online in March with our joint venture with Qatar Energy at Golden Pass, Texas. Train 1 will deliver an increase of about 5% relative to 2025 U.S. export capacity.

By the time the third train is online and producing, we will **increase the country's current LNG export capacity by roughly 15%.**

$71B
PLAN

Over the next 4 years, we plan to invest a further $71 billion in the United States, with more than $6 billion invested in our U.S. refineries.
